

ENERLYTICS

Smart energy governance for
Oman's institutional sector

THE PROBLEM

Oman's Energy reform has introduced **structural risk** into institutional energy performance

01

Unexplained Bills

- > Cost structure is a black box - no foundation for financial and operation decisions.
- > Summer peak pricing **+70-140%**

02

Cost Concentration

23-40%

of total annual electricity cost

13 Weeks

May-July peak window

03

Fragmented View = Fragmented Decisions

- > Operations, finance, compliance and reporting each see different data - data - no one has the full picture

04

No One Knows What Normal Looks Like

- > No national energy benchmark framework - EUI varies up to 4x between similar institutions.

LIVE DEMO

Real-time visibility into operational performance and peak exposure

Platform Capabilities

Real-time Load Dashboard

Live energy monitoring with TOU (Time of Use) cost breakdown.

Peak Risk Alerts

Predictive alerts for May-July summer peak surcharge windows.

Tariff-Aware Baseline

Tracking actuals against Oman-specific regulatory baselines.

Anomaly Detection

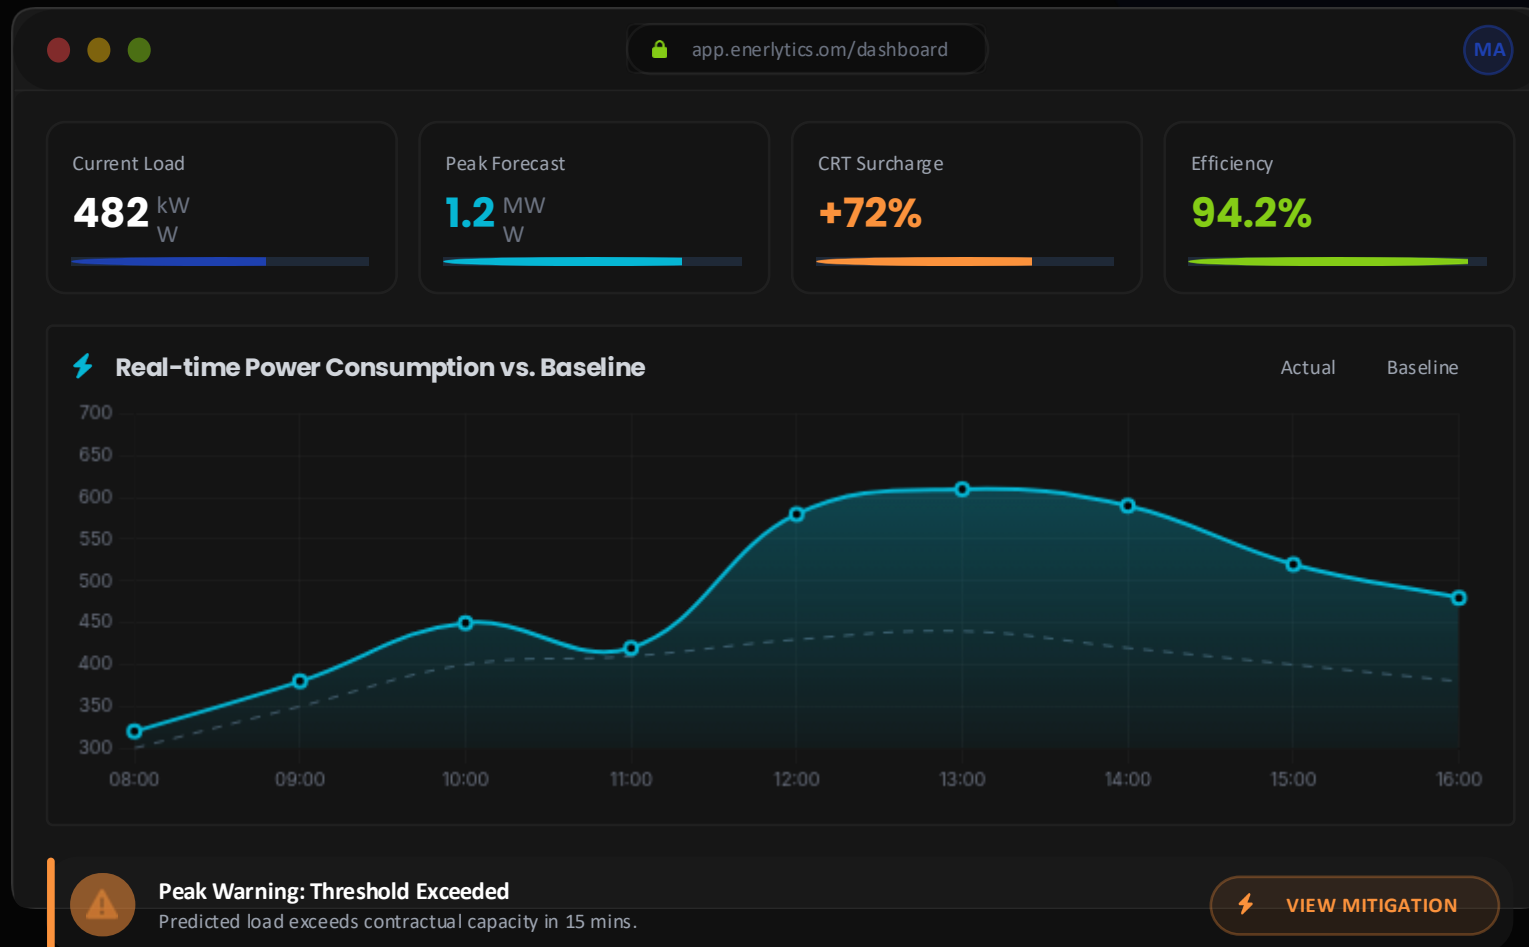

AI-driven issue triage and fault detection diagnostics.

Audit-Ready Reporting

Automated compliance reports for institutional governance.

▶ LIVE DEMO

ENERLYTICS

Business MODEL

ENERLYTICS

Built natively for Oman's CRT framework to govern peak exposure

Monitor

Understand your energy cost exposure

250 OMR / mo

- Bill normalization and TOU breakdown
- Demand visibility reporting
- CRT risk flags

0.1 – 1.5 GWh / yr · 3-5% of bill

Core Value

Analyse

Identify and quantify avoidable costs

500 OMR / mo

- Oman-specific baselines and diagnostics
- AI anomaly detection and alerts
- Load shifting and peak mitigation
- APSR audit-ready reporting

1.5 – 5 GWh / yr · 3:1 ROI in year one

Govern

Control and optimize cost at scale

1,050 OMR / mo

- Fault detection and diagnostics
- Portfolio benchmarking
- Predictive maintenance
- Success fee on verified savings

5+ GWh / yr · multi-site portfolios

MARKET SIZE

Targeting high-value institutional consumers within the GCC energy transition

ENERLYTICS

TAM GCC

Total Addressable Market

13 Billion OMR

Total Energy Management Market across GCC region.

Large Consumers

Decarbonization

SAM Oman Market

Serviceable Available Market

0.7 Billion OMR

Oman residential and non residential users CRT Users (total electricity bill market)

Grid-Connected
Connected

CRT Mandate

SOM

Serviceable Obtainable Market

0.5 Billion OMR

10,000 - 12,000 CRT Clients (Beachhead)

54

Enterprise Clients

380K

OMR Target

~1%

SOM Penetration

PROOF

OUR TEAM

Muath Al Hinaï
Founder & CEO

MSc in Energy systems | 3+ years experience in energy modeling and financial decision making in the US | Technoeconomic experience for solar and energy storage.

Osama Al Shuaili
Co-Founder & CTO

MSc AI GB from Imperial| Expertise in IoT, predictive analytics, utilized AI artitecture to improve cell segmentation| Built AI enhancing cardiac imaging reliability

Qusai Al Badawi
Co-Founder & COO

Expertise in Retro-commissioning| Delivered multi-site energy projects at OQAE and HEAPY with PMP-aligned execution

Mahdi Abuhoms
Systems Architect

MSc Energy & Sustainability| CO2 compliance and reporting consultant at Norway NO .Designed national-scale energy systems using advanced algorithmn.

Hicham Lahmidi
Strategic Advisor

PhD Engineering, 5x AEE Certified

Secretary of the Association of Association of Energy Engineers FR

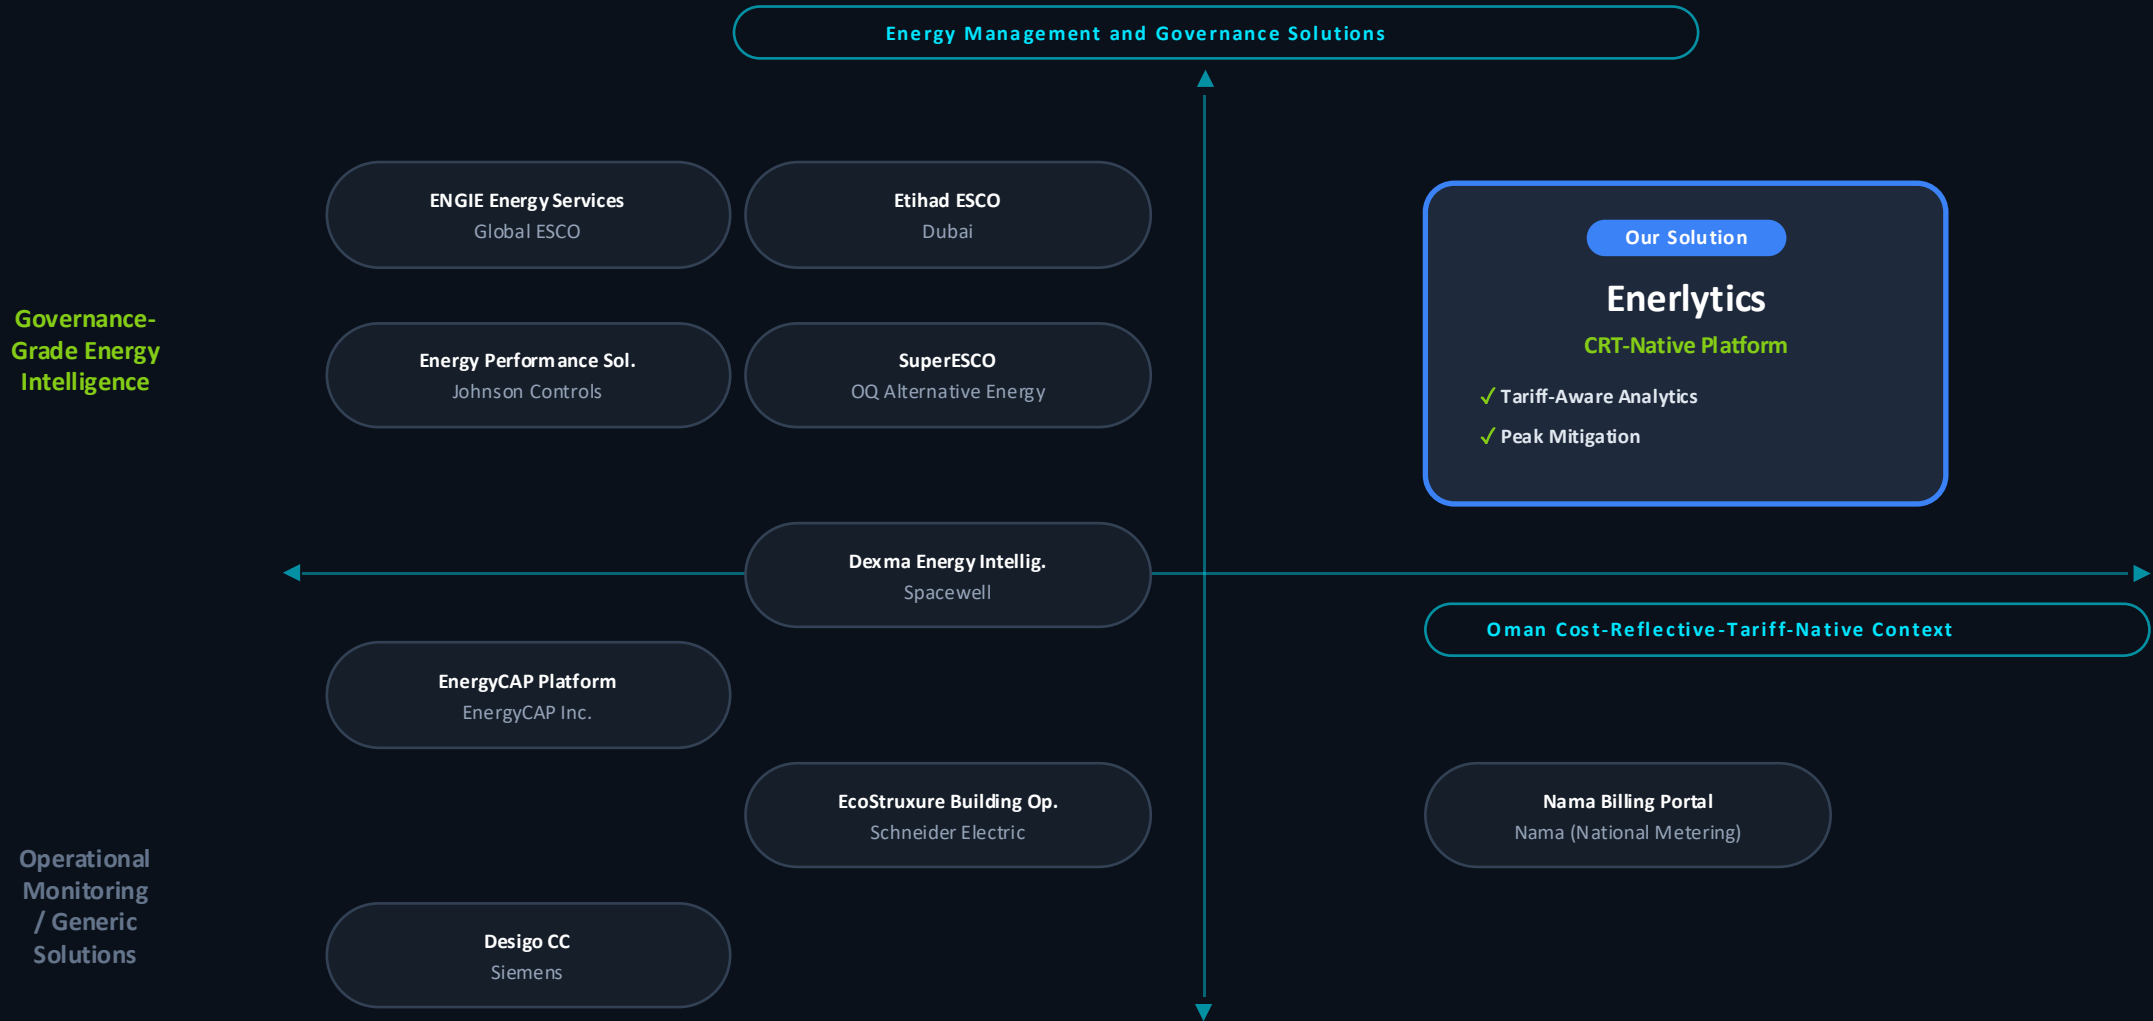

COO of Elithis Solutions (EUR 9M)

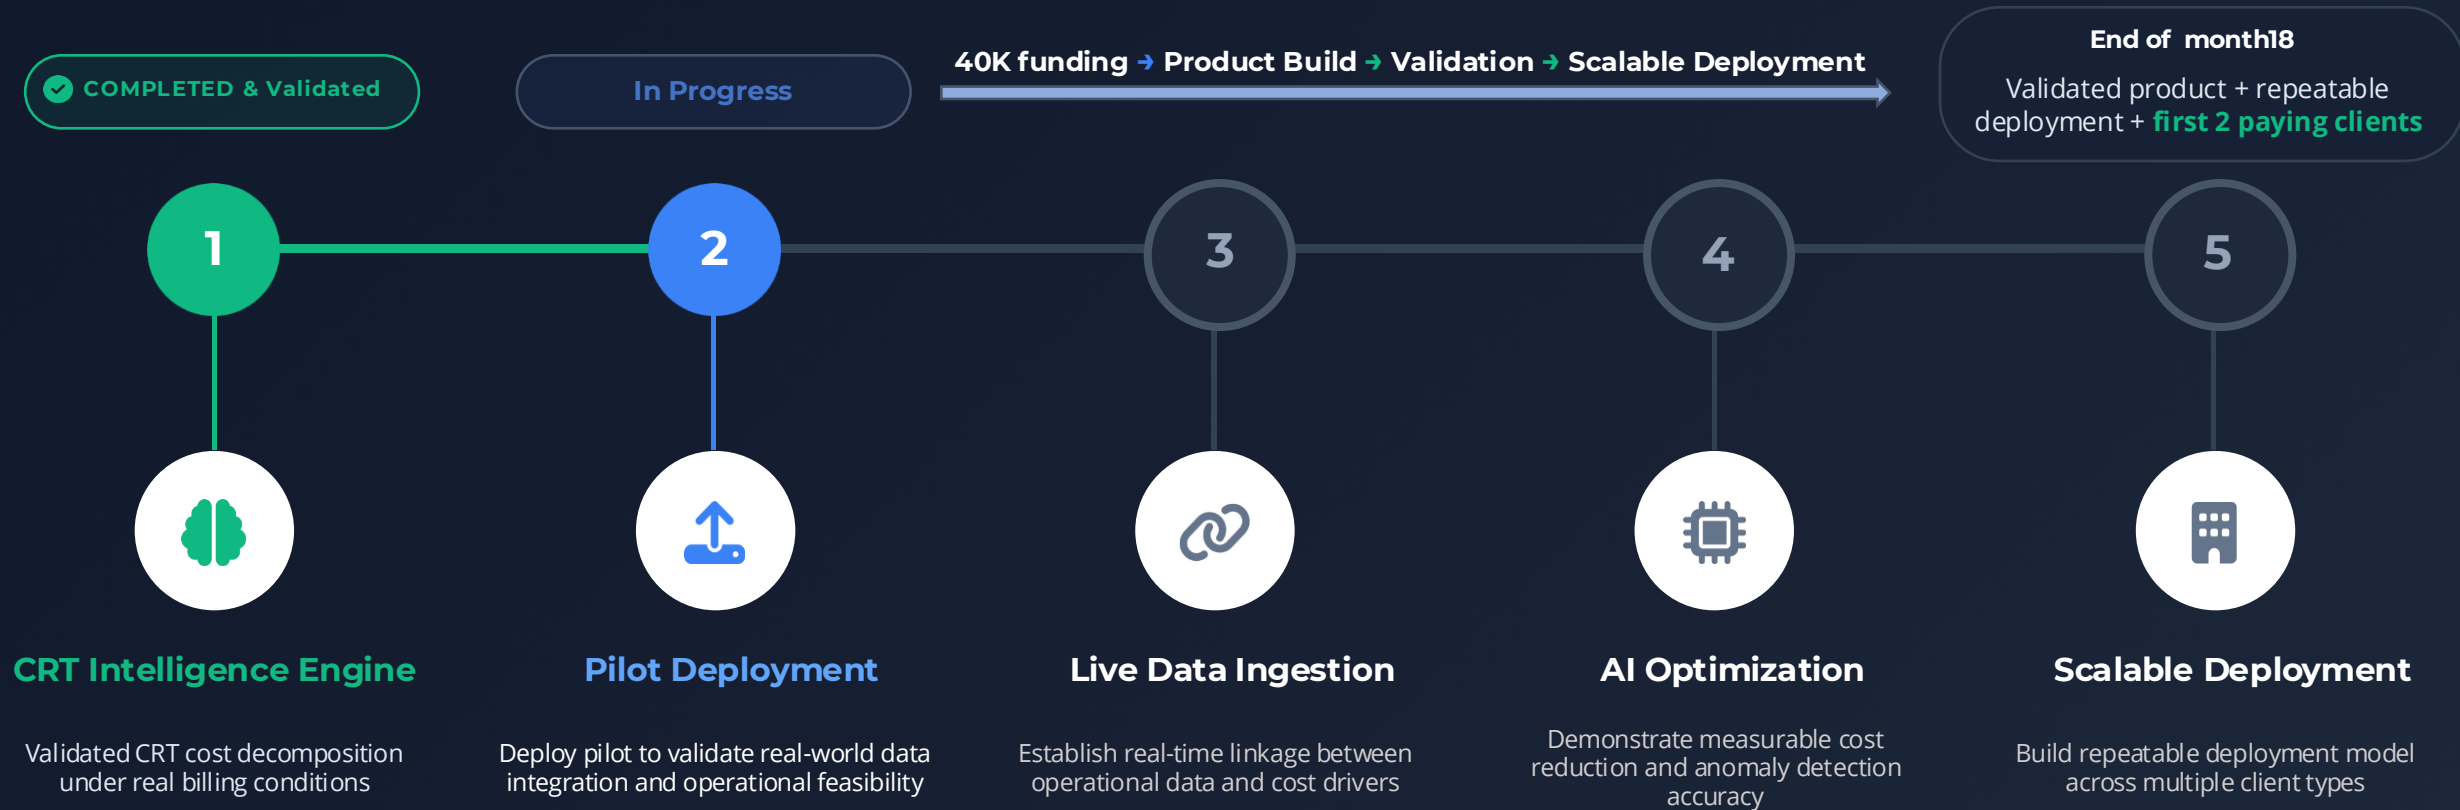

25 years of institutional energy governance

Competitive Landscape

ENERLYTICS

The reform is live. The market is waiting. **We are ready.**

Turning energy cost into something you can control

Pilot deployment underway | OQ Accelerator
